

## Gas Breach Pipework Rig

Designed in partnership with British Energy

This equipment is designed to simulate a breach in a section on pressurised pipework.

The rig simulates a breach and allows the emergency response team (IRT/SERT) to practice repair techniques on equipment which is off line but looks similar to the real thing.

- Fitted with truck stops for stability
- Easily moved on Swivel Brake Castors
- Connections for low pressure air/water supply
- Supplied with 4 spool pieces with various built in faults
- Various scenarios can be set up by changing spool pieces
