

SERT - Spectacle Piece Rig

Designed in partnership with British Energy

This equipment is designed to simulate a problem with a section of pipe work with a spectacle piece incorporated.

This enables the emergency response teams (IRT/SERT) to practice repair techniques on equipment which is off line but looks similar to the real thing.

- Easily moved on Swivel Brake Castors
- Manufactured from 3" NB pipe
- Aluminum checker plate base over box section frame
- Various scenarios can be set up by changing spool pieces
