

White Metal Bearing Scraping Rig Twin Blocks 1

Designed in partnership with British Energy

This rig is designed to give trainees the opportunity to scrape a pair of heavy walled white metal bearings out to fit a suitable shaft. It comes complete with:

- 6 x Special White Metal Bearing Shells (Ø108)
- 2 x Modified Bearing Housings
- 3 x 24" Long Hollow Shafts (Ø108, Ø109, Ø110)

The shafts will be driven by a manual crank handle to allow the trainee to safely turn the shafts in the bearings. We will also supply 2 mounts which will hold the top half of the plumber blocks securely while scraping.

The assembly will be mounted on an aluminium 5 bar plate work surface. Fitted onto a Beta C28N O Supertank Trolley Mobile Workbench which is 700 MM wide and can fit through most standard doors.
